### Goals and Purpose

1. Build the capacity of school-based practitioners and educators from the same field or discipline to effectively support the development, learning, and needs of the students in their school, town, city, region, and state.

2. Create a shared understanding of best practices in the identified field or discipline.

3. Allow for a network of school-based professionals from the same field or discipline to connect on a consistent basis through formal (meetings, seminars, conferences, virtual classrooms, etc.) and informal (emails, texts, virtual classroom, etc.) structures designed to create community.

4. Provide ongoing, focused and applicable professional learning opportunities that are routinely adjusted and revised based on the needs identified by group members.
